Suphachat Sriharan

Tel: +66 63-415-9164 // *suphachat.sriharan@gmail.com* // *linkedin.com/in/suphachat*

Engineering student who builds robots, AI systems, and software with one aim: making technology useful to people. Curious by default, quick to learn new tools, and happiest when a project leaves the lab.

Education

Chulalongkorn University, International School of Engineering (ISE) Bangkok, Thailand
Bachelor of Engineering (B.Eng.) Aug. 2025 – Present

Chulalongkorn University Demonstration Secondary School Bangkok, Thailand
Science and Mathematics Program May 2022 – Mar. 2025

Experience

EIC-ARRT, Aerial Robotics Research Team Bangkok, Thailand
Team Lead Apr. 2026 – Present

- We build and fly autonomous multirotors, running PX4 on a Pixhawk 6X with ROS 2 and MAVSDK on a companion computer for vision and mission autonomy.
- We fly every mission in Gazebo first, including waypoint mapping and precision landing.

Getabec Public Company Limited – Robotic Boiler Inspection Bangkok, Thailand
Robotics Engineer, five-person EIC Chula contract team Mar. 2026 – Present

- Developing a magnetic-wheeled crawler robot that inspects boiler surfaces for dents, scratches, and marks.
- Combines a Raspberry Pi 5 / Arduino stack, IMU, and global-shutter camera with photometric stereo imaging, currently in bench testing, to detect and measure surface defects.
- Demonstrated the working prototype under the Getabec name at ProPak Asia 2026 (BITEC, Bangkok).

AIMET Bangkok, Thailand
Software Developer Dec. 2024 – Oct. 2026

- Develop the MDCU (mobile, web) and CPIRD (mobile) wellness center apps for medical students.
- Deploy and maintain the apps' backend services on Google Cloud.
- Analyze and fix bugs across development and testing, improving system reliability.

2025 ICPC Asia Bangkok Regional Contest Bangkok, Thailand
Network/OS Staff Sep. 2025 – Nov. 2025

- Set up the competition server, automated judge/grader, and network for a regional contest of 58 teams from 25 universities across six countries, hosted by Chulalongkorn University.
- Imaged and configured contestant workstations, set up a Squid proxy to control contestants' network access, and kept OS and network stable throughout the contest.

Faculty of Medicine, Chulalongkorn University Bangkok, Thailand
AI Research Assistant Feb. 2025 – May 2025

- Collaborated with MDCU professors on an AI model for predicting liver cancer recurrence from MRI images, contributing to ongoing medical research.

Leagues of Code Bangkok, Thailand
Programming Tutor Oct. 2023 – Oct. 2025

- Taught C++, Python, data structures, and AI fundamentals to students.

V89 Technology Co., Ltd. Bangkok, Thailand
Research Assistant & AI Engineer Jul. 2024 – Nov. 2024

- Designed and implemented an AI system for segmenting long-form videos and producing summaries.

Research

Still Citing the Old Law? Statutory Knowledge and Temporal Anchoring in Thai Legal Question Answering

Accepted: NeurIPS 2026 New in ML Workshop; NeurIPS 2026 Global South AI Workshop

- Built a bilingual Thai/English benchmark of 60 vignettes on four dated amendments to Thai law, with every gold label traceable to the Royal Gazette.
- Evaluated nine LLMs over 3,036 responses, separating anchoring to repealed law from lack of knowledge; 97.7% of wrong answers came with no expression of uncertainty.

Any Promoter Will Do: Auditing a Sequence-to-Expression Model on Patient-Derived Data

Accepted: NeurIPS 2026 New in ML Workshop; NeurIPS 2026 ICBINB Workshop

- Audited a released convolutional model predicting mRNA abundance from promoter sequence on patient exome data for 15,370 genes, adding missing baselines and ablations.
- Showed that swapping, shuffling, or scrambling the promoter changes R^2 by under 0.010: the model barely uses the sequence it is given.

Awards and Achievements

RoboCup@Home 2026 – Open Platform League

6th Place, Incheon, South Korea

- Placed 6th worldwide with EIC-Chula (Engineering Innovator Club, Chulalongkorn University).
- Developed the robot's AI components and integrated perception, navigation, and manipulation in ROS.
- Implemented manipulator-arm control routines for object grasping and placement.

ASPINE: AI for Sequence-based Predictions and Identification of Neoantigen Expression

iGEM 2024 Silver Medal, France

- Developed an ML model predicting neoantigen expression from DNA sequences in breast cancer.
- Silver Medal at iGEM 2024, a worldwide synthetic biology competition, with MDCU medical students.

Super AI Engineer Season 4

Thailand, 2024

- Completed intensive hands-on AI training and served as project manager in the LANTA supercomputer hackathon, planning tasks and coordinating the team to on-time delivery.

Projects

AI-Powered Cybersecurity Log Investigation Using Knowledge Graphs

- Built an AI system that transforms large volumes of security logs into a knowledge graph linking users, hosts, processes, and network events.
- Applied graph-based reasoning and machine learning to detect abnormal relationships and attacks.
- Designed and implemented the full pipeline: log ingestion, graph construction, and anomaly detection.

AI-Based Cancer Recurrence Prediction Using MRI Images

- Designed a deep learning pipeline for liver segmentation and recurrence prediction from MRI images and clinical metadata, evaluated with accuracy, F1 score, and AUC.

Mock Test Website

- Built a full-stack mock test platform (Go, React.js, Node.js, MongoDB) with timed exams, instant scoring, and visualized results.
- Implemented authentication, user/admin dashboards, and automatic grading.

Skills and Interests

Languages: Python, C++, Java, JavaScript, TypeScript, Go, SQL, MATLAB
AI & Robotics: PyTorch, ROS / ROS 2, PX4, Gazebo, Linux
Web, Data & Cloud: React, Node.js, MongoDB, Firestore, Google Cloud, Power BI, Tableau
Interests: Bass guitar and singing; basketball, badminton, and chess
